calculo

Streamline Deployment of Compliance Driven Courseware and Accurately Calculate CPE

Calculo is a cloud-based software application that provides a workflow-driven approach to creating course agendas that define and automatically calculate the maximum credit allowable upon completion. The software enforces credit rules and validates that all regulatory requirements are met, including documentation needed. Calculo also maintains version and audit history as changes are made over the life cycle of a course. At the class level, it supports instructor assignment, attendance reporting, roster management (including external learners and walk-in registrations) and enables the automation of awards. Additional Calculo features include a method for users to submit external training for credit consideration, attest to their attendance after a class has been delivered, and view certificates of completion.

Eight Ways to Leverage Calculo

1 Build detailed agendas broken out by subject area

2 Calculate individualized and accurate credit awards

3 Manage and track all required regulatory information

4 Upload and store supporting documentation

5 Facilitate approval workflow and content review signoff

6 Maintain course versions with audit history

7 Integrate with multiple systems using APIs

8 Control module access using role-based permissions
