

# Elsevier Checklist Integration Connector

## Eliminate Manual Updates in Cornerstone SBX

Educe's Elsevier Checklist Integration Connector is a cloud-based application that automates ongoing checklist updates by Elsevier into Cornerstone SBX. It ensures checklists within Elsevier's training packages are always up to date, eliminating the need for manual intervention by administrators and ensuring learners are certified using the most current checklist available.

### How It Works

As updates are released, the connector identifies Elsevier checklist updates and sends the information to a database managed by Educe. The data is transformed and uploaded to Cornerstone SBX to update the checklist content on each class for both in-progress and assigned learners. Checklists are republished, and an email is sent to administrators summarizing updates and providing detailed error logs.

### The Benefits

- 1 Automates Elsevier Checklist Updates
- 2 Reduces Administrative Burden
- 3 Mitigates Risk of Human Error
- 4 Provides Access to Detailed Log Files
